**The Knowledge Gap** - Natalie Wexler 2020-08-04

The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler

stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

**Researching Accounting Education** - Richard M.S. Wilson 2016-04-14

There is no doubt that accounting education scholarship and research in Australia is not only thriving, but is amongst the best in the world. Nor is there any doubt that Australian scholars in this field punch well above

their weight within the international arena. This book is not derived from a conventional special issue (i.e. one focussing on a specific theme such as audit education, communication in accounting education, or the interface between accounting education and professional training). Instead, it presents a collection of leading edge contributions to accounting education research from Australian scholars on topics which have international relevance. These topics reflect the typical breadth of research in this field being undertaken in Australia - including coverage of students' conceptions of accounting work, the impact of entry mode on accounting students' approaches to learning, listening skills in accounting practice, and student's performance in online accounting courses. Taken together, the contents of this book will help to enhance the educational base of accounting practice by providing guidance to educators in improving their pedagogic practice. This book was originally published as a special issue of *Accounting Education: an international journal*.

Interpersonal Relationships in Education: From Theory to Practice -

David Zandvliet 2014-08-07

This book brings together recent research on interpersonal relationships in education from a variety of perspectives including research from Europe, North America and Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book comprises. The volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the

relationships between teachers and their professional colleagues.

**Assessing 21st Century Skills** - National Research Council 2011-09-16

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social

skills, team-work, cultural sensitivity, dealing with diversity  
Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning  
Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

*Interpersonal Interactions and Language Learning* - Shin Yi Chew 2021-04-13

This book takes as its starting point the assumption that interpersonal communication is a crucial aspect of successful language learning. Following an examination of different communicative models, the authors focus on traditional face-to-face (F2F) interactions, before going on to compare these with the forms of computer-mediated communication (CMC) enabled by recent developments in educational technology. They also address the question of individual differences, particularly learners' preferred participation styles, and explore how F2F and CMC formats might impact learners differently. This book will be of interest to students and scholars of computer-mediated communication (CMC), computer-assisted language learning (CALL), technology-enhanced language learning (TELL), language acquisition and language education more broadly.

[The Role of Teacher Interpersonal Variables in Students' Academic Engagement, Success, and Motivation](#) - Ali Derakhshan 2022-07-05

*Skills Based Health Education - Book Only* - Mary Connolly 2011-01-06  
Skills - Based Health Education provides pre-service and practicing teachers with the pedagogical foundation and tools to develop a comprehensive PreK-12 health education program using the National Health Education Standards. Rather than solely focusing on teaching content, an approach which can prove ineffective in developing healthy behaviors, readers learn to teach the content and skills their students need to be healthy and prepared for the 21st century. The book addresses each one of the national standards with specific directions regarding how to apply the standard, and performance indicators to plan and implement performance tasks that target instruction to a student need. Readers are shown how to establish student need, select content and skill performance indicators to meet the need, and plan and implement assessment and instruction. PowerPoint Presentations and a TestBank are available as free Instructor Downloads. Companion website includes lessons, units, and other support materials to enhance teaching and learning.
