Simulation in Healthcare Education - Harry Owen 2016-03-05

Simulation in healthcare education has a long history, yet in many ways, we have been reinventing the wheel during the last 25 years. Historically, simulators have been much more than simple models, and we can still learn from aspects of simulation used hundreds of years ago. This book gives a narrative history of the development of simulators from the early 1700s to the middle of the 20th century when simulation in healthcare appeared to all but die out. It is organized around the development of simulation in different countries and includes at the end a guide to simulators in museums and private collections throughout the world. The aim is to increase understanding of simulation in the professional education of healthcare providers by exploring the historical context of simulators that were developed in the past, what they looked like, how they were used, and examples of simulator use that led to significant harm and an erosion of standards. The book is addressed to the healthcare simulation community and historians of medicine. The latter in particular will appreciate the identification and use of historic sources written in Latin, German, Italian, French, Polish and Spanish as well as English.

Photographs, film and television influence how we view and approach phenomena as diverse as war, diplomacy, financial crises and election campaigns. Other visual fields, from art and cartoons to maps, monuments and videogames, frame how politics is perceived and enacted. Drones, satellites and surveillance cameras watch us around the clock and deliver images that are then put to political use. Add to this that new technologies now allow for a rapid distribution of still and moving images around the world. Digital media platforms, such as Twitter, YouTube, Facebook and Instagram, play an important role across the political spectrum, from terrorist recruitment drives to social justice campaigns. This book offers the first comprehensive engagement with visual global politics. Written by leading experts in numerous scholarly disciplines and presented in accessible and engaging language, Visual Global Politics is a one-stop source for students, scholars and practitioners interested in understanding the crucial and persistent role of images in today's world.

Guidelines on Hepatitis B and C Testing - World Health Organization 2018-02-06

Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both

prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention, care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are intended for use across age groups and populations.

Castes and Tribes of Southern India - Edgar Thurston 2020-07-26

Castes and Tribes of Southern India is a seven-volume encyclopedia of social groups of Madras Presidency and the princely states of Travancore, Mysore, Coorg and Pudukkottai published by British museologist Edgar Thurston and K. Rangachari in 1909. The seven-volume work was one of several such publications resulting from the Ethnographic Survey of India project which was formally instituted by the Government of

British India in 1901. The Survey was intended to record details of the manners, customs and physical features of Indian castes and tribes using in part the anthropometric methods that had first been used in India by Herbert Hope Risley for his survey of the tribes and castes of Bengal. Eight years of funding was allotted for the purpose. Edgar Thurston was the son of Charles Bosworth Thurston of Kew, London. Schooled at Eton College, he then studied medicine at King's College, London, qualifying as LRCP in 1877. He worked as a medical officer in Kent County Lunatic Asylum and became a curator of the museum at King's College before joining the Madras Museum in 1885 as a superintendent. The British government in India appointed a Superintendent of Ethnography for each province. Thurston, who had been Superintendent of the Madras Government Museum since 1885, had already conducted some ethnographic work in his studies of the hill tribes of Nilgiris District, published in 1894, and elsewhere. He was appointed Superintendent for Madras Presidency, while L. K. Ananthakrishna Iyer and N. Subramania Iyer were respectively appointed Superintendents for the princely states of Cochin and Travancore. The reports for the two princely states were later integrated with Thurston's work to form the Castes and Tribes of Southern India, as were the results of Thurston's earlier researches into the hill tribes. [citation needed] The state of Mysore was allocated to Thurston for an anthropometric survey but excluded for the ethnographic survey. In his investigations in the Madras Presidency, Thurston was assisted by K. Rangachari of the Government Museum. Nature magazine, in its September 1910 issue, described the work as "a monumental record of the varied phases of south Indian tribal life, the traditions, manners and customs of people. Though in some respects it may be corrected or supplemented by future research it will long retain its value as an example of out-door investigation, and will remain a veritable mine of information, which will be of value."

Food Across Cultures - Giuseppe Balirano 2019-02-19

This edited volume brings together original sociolinguistic and cultural contributions on food as an instrument to explore diasporic identities. Focusing on food practices in cross-cultural contact, the authors reveal how they can be used as a powerful vehicle for positive intercultural exchange either through conservation and the maintenance of cultural continuity, or through hybridization and the means through which migrant communities find compromise, or even consent, within the host community. Each chapter presents a fascinating range of data and new perspectives on cultures and languages in contact: from English (and some of its varieties) to Italian, German, Spanish, and to Japanese and Palauan, as well as an exemplary range of types of contact, in colonial, multicultural, and diasporic situations. The authors use a range of integrated approaches to examine how socio-linguistic food practices can, and do, contribute to identity construction in diverse transnational and diasporic contexts. The book will be of particular interest to students and scholars of translation, semiotics, cultural studies and sociolinguistics.

Functional Foods and Dietary Supplements - Athapol Noomhorm 2014-03-11

Functional foods are foods which contain bioactive components, either from plant or animal sources, which can have health benefits for the consumer over and above their nutritional value. Foods which have antioxidant or cancer-combating components are in high demand from health conscious consumers: much has been made of the health-giving qualities of fruits and vegetables in particular. Conversely, foods which have been processed are suffering an image crisis, with many consumers indiscriminately assuming that any kind of processing robs food of its "natural goodness". To date, there has been little examination of the actual effects - whether positive or negative - of various types of food processing upon functional foods. This book highlights the effects of food processing on the active ingredients of a wide range of functional food materials, with a particular focus on foods of Asian origin. Asian foods, particularly herbs, are becoming increasingly accepted and demanded globally, with many Western consumers starting to recognize and seek out their health-giving properties. This book focuses on the extraction of ingredients which from materials which in the West are seen as "alternative" - such as flour from soybeans instead of wheat, or bran and starch from rice - but which have long histories in Asian cultures. It also highlight the incorporation of those bioactive compounds in foods and the enhancement of their bioavailability. *Functional Foods and Dietary Supplements: Processing Effects and Health Benefits* will be required reading for those working in companies, research institutions and universities that are active in the areas of food processing and agri-food environment. Food scientists and engineers will value the new data and research findings contained in the book, while environmentalists, food regulatory agencies and other food industry personnel involved in functional food production or development will find it a very useful source of information.
