Buildings for Education - Stefano Della Torre 2019-01-01

This open access book presents theoretical and practical research relating to the vast, publicly financed program for the construction of new schools and the reorganization of existing educational buildings in Italy. This transformative process aims to give old buildings a fresh identity, to ensure that facilities are compliant with the new educational and teaching models, and to improve both energy efficiency and structural safety with respect to seismic activity. The book is divided into three sections, the first of which focuses on the social role of the school as a civic building that can serve the needs of the community.

Innovations in both design and construction processes are then analyzed, paying special attention to the Building Information Modeling (BIM) strategy as a tool for the integration of different disciplines. The final section is devoted to the built heritage and tools, technologies, and approaches for the upgrading of existing buildings so that they meet the new regulations on building performance. The book will be of interest to all who wish to learn about the latest insights into the challenges posed by, and the opportunities afforded by, a comprehensive school building and renovation program.

Encyclopedia of Islamic Civilisation and Religion - Ian Richard Netton 2009

The Encyclopedia of Islamic Civilization and Religion provides scholarly coverage of the religion, culture and history of the Islamic world, at a time when that world is undergoing considerable change and is a focus of international study and debate. The non-Muslim world's perceptions of Islam have often tended to be dominated by unrepresentative radical extremist movements and media interpretations of events involving such movements, to the extent that many people are unaware of the depth and variety of Islamic thought. At the same time, many who have had a formal training in Islamic studies have tended to concentrate on the traditional, to the exclusion of the contemporary. The Encyclopedia of Islamic Civilization and Religion covers the full range of Islamic thought, in historical depth, but it also provides substantial coverage of contemporary trends across the Muslim world. -- Back cover.

Terrence Malick - Lloyd Michaels 2009

For a director who has made only four feature films over three decades, Terrence Malick has sustained an extraordinary critical reputation as one of America's most original and independent filmmakers. In this book, Lloyd Michaels analyzes each of Malick's four features in depth, emphasizing both repetitive formal techniques such as voiceover and long lens cinematography as well as recurrent themes drawn from the

director's academic training in modern philosophy and American literature. Michaels explores Malick's synthesis of the romance of mythic American experience and the aesthetics of European art film. He performs close cinematic analysis of paradigmatic moments in Malick's films: the billboard sequence in *Badlands*, the opening credits in *Days of Heaven*, the philosophical colloquies between Witt and Welsh in *The Thin Red Line*, and the epilogue in *The New World*. Urban Street Design Guide - National Association of City Transportation Officials 2013-10-01

The NACTO Urban Street Design Guide shows how streets of every size can be reimaged and reoriented to prioritize safe driving and transit, biking, walking, and public activity. Unlike older, more conservative engineering manuals, this design guide emphasizes the core principle that urban streets are public places and have a larger role to play in communities than solely being conduits for traffic. The well-illustrated guide offers blueprints of street design from multiple perspectives, from the bird's eye view to granular details. Case studies from around the country clearly show how to implement best practices, as well as provide guidance for customizing design applications to a city's unique needs. Urban Street Design Guide outlines five goals and tenets of world-class street design:

- Streets are public spaces. Streets play a much larger role in the public life of cities and communities than just thoroughfares for traffic.
- Great streets are great for business. Well-designed streets generate higher revenues for businesses and higher values for homeowners.
- Design for safety. Traffic engineers can and should design streets where people walking, parking, shopping, bicycling, working, and driving can cross paths safely.
- Streets can be changed. Transportation engineers can work flexibly within the building envelope of a street. Many city streets were created in a different era and need to be reconfigured to meet new needs.
- Act now! Implement projects quickly using temporary materials to help inform public decision making. Elaborating on these fundamental principles, the guide offers substantive direction for cities seeking to improve street design to create more inclusive, multi-modal urban environments. It is an exceptional resource for redesigning streets to serve the needs of 21st century cities, whose residents and visitors demand a variety of transportation options, safer

streets, and vibrant community life.

The Coming Jobs War - Jim Clifton 2013-09-16

Definitive leadership strategy for fixing the American economy, drawn from Gallup's unmatched global polling and written by the company's chairman. What everyone in the world wants is a good job. "This is one of the most important discoveries Gallup has ever made," says the company's Chairman, Jim Clifton. In *The Coming Jobs War*, Clifton makes the bold assertion that job creation and successful entrepreneurship are the world's most pressing issues right now, outpacing runaway government spending, environmental degradation and even the threat of global terrorism. The book is grounded in findings from Gallup's World Poll, which reveals the implications of the jobs war on everything from economics to foreign policy to nothing less than America's moral authority in the world. And it offers a prescription for attacking the jobs issue head-on. Clifton argues that the solution to creating good jobs must be found in cities, not in the federal government. Promoting entrepreneurship and job creation must be the sole mission and purpose of cities' business leaders, government officials and philanthropists. Clifton says that the next big breakthrough will come from the combination of the forces within big cities, great universities and powerful local leaders. Their combined effect is the most reliable, controllable and predictable solution to America's biggest problem. Strong leadership teams and a natural order are already in place within cities — in governments and local business and philanthropic entities, with caring leaders working on initiatives to fuel local economic growth and to create good jobs. The feat these leaders have to pull off is doubling their entrepreneurial energy by aligning their local forces: local tribal leaders, super mentors and universities. Winning the jobs war will require all hands on deck, and failure is not an option, especially for the United States, which has been the global leader in promoting freedom and entrepreneurship. America's place in the world is at stake, and there are other countries poised to surpass a sputtering U.S. economy that is currently growing at only 2% annually. The biggest threat? China, with a GDP that is increasing at nearly 10% annually — a pace that will make it

the world's leading and most influential economy within the next 30 years. While the statistics are dire, Clifton remains optimistic about America's ability to win the jobs war because America has been here before. "The Greatest Generation saved America by beating the Japanese and Germans at [World War II]. The Baby Boomers saved America a second time by beating the same foes, Japan and Germany, in an economic war that determined the leadership of the free world, again," he says. *The Coming Jobs War* offers a clear, brutally honest look at America's biggest problem and a cogent prescription for solving it.
